Foreword

FunGolf is the first golf GPS with 3D view and smart yardage indicators.

Unlike other products, FunGolf knows more than a satellite image and scorecard for the course you are playing.

Every single fairway, green, bunker and other hazards have been modeled in 3D, so FunGolf is able to offer not only a subjective view of the course as you are seeing it, but also calculates distances to the hole and various hazards. They are updated automatically as you move on the course.

Thank you for downloading FunGolf.

Apple Watch Support

FunGolf is also available on the Apple Watch.

Get the yardages right on your wrist, enter your score and track your shots, all while keeping your phone in your pocket!

The data is seamlessly synced with your phone, so you can still view your post-round stats and recap on your phone after playing with the Apple Watch.

Paid Offers

Some features of FunGolf are only available to paid users. Therefore you may be directed to the FunGolf Store while attempting to access some features.

Please sustain our development effort, as well as technical support and maps database maintenance.

For the price of a few golf balls, we're confident that FunGolf will help you get the most of your game.

Purchases are tied to your Apple ID. If you changed your phone or reinstalled FunGolf, and you have already paid and offer, tap the Restore Purchases button.

Support

We strive to provide the best service and technical support possible.

Contact us to ask any question:

Email: support@fungolf.com

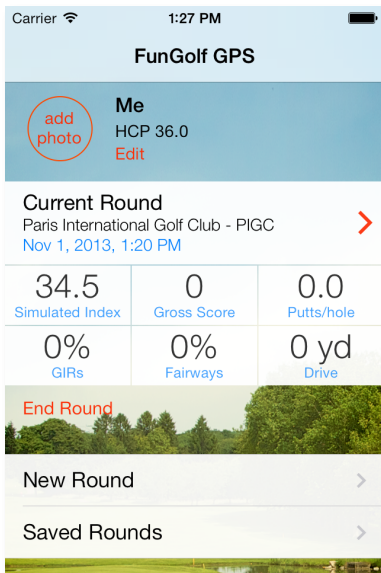

Twitter: @FunGolfGPS

We usually answer within 1–2 hours, and always in less than 2 business days.

You can also visit our FaceBook page:
www.facebook.com/fungolfgps

Now let's take a guided tour through the app.

Main Menu

When you launch the app, you see the main menu.

The main menu lets you:

- create a New Round
- view your Saved Rounds
- view Statistics
- access the "Account & Settings" menu
- send an email to our team using the "Support" Link.

The application version number is shown at the bottom of the menu. Use the "App Store" application to check for upgrades to the FunGolf application.

➔ *If you have not already done so, please go to the "**Account & Settings**" menu to set the distance units (meters or yards).*

Once set, any distance shown in the app will respect your choice.

Let's start by creating a new round:

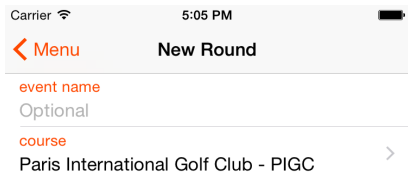

Tap the **New Round** button. The **Round Settings** screen will appear.

Round Settings

The Round Settings let you select a golf course, add the players, and set the start date for that round.

Selecting a Course

Tap the **Course** button.

Carrier 5:05 PM

< Menu New Round

event name
Optional

course
Paris International Golf Club - PIGC >

➔ *FunGolf saves the last used course. If you are playing on the same course as in the previous round, you can skip this step.*

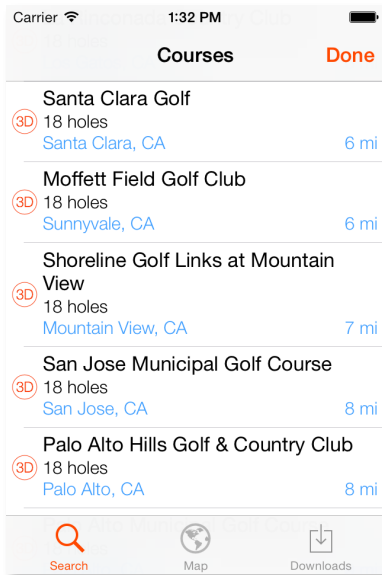

The **Courses** screens appears. It has three tabs:

- **Search**
- **Map**
- **Downloads**

➔ *You should allow FunGolf to access your location information. Otherwise it will not be able to show you the nearby courses or give yardage while on the course.*

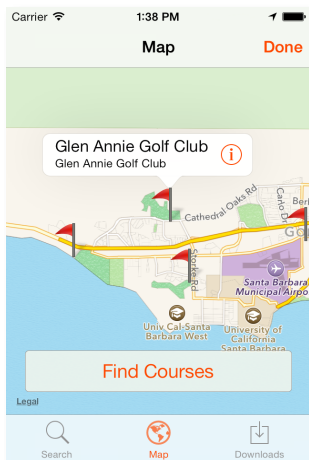

The **Search** tab lists the nearby golf courses. If you are looking for a particular golf course, even far away, you can tap part of its name in the **Find Course** search field.

FunGolf sorts the results from the nearest to the furthest facility.

The **Map** tab shows the courses in a given location on a map. By default, this map is

centered around your position, but you can pan and zoom to view another area.

Once found, tap the **Find Courses** button:
FunGolf will list the golf courses around that
area.

Tap on any pin representing a golf course to view detailed information for it.

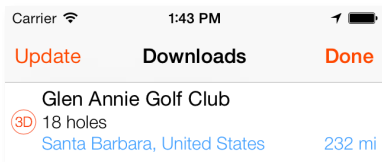

➔ *FunGolf downloads the golf course data on your device. This means you do not need a network connection to use it while on the course.*

This is especially useful while playing abroad: you can turn off data and still use FunGolf, without worrying about expensive roaming plans.

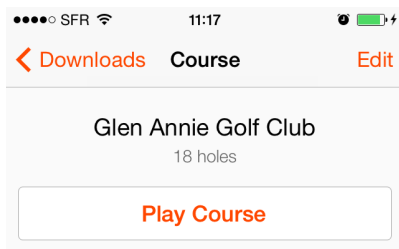

The **Downloads** tab shows the list of all the courses you have already downloaded.

Golf courses can be updated on a regular basis. (for example, the scorecard may change, as well as the course layout itself).

To ensure you have the latest data for your downloaded courses, please tap the **Update** button.

Tap a course name to reveal detailed info.

Once you have selected your course, tap the «**Play Course**» button to start playing.

Adding Players

On the Round Settings screen, tap the player you want to edit, or the **Add Player** button to add or edit players in your round.

The **Player** screen will appear. To set up a player, use the **Add from Contacts** button to select a contact from your Address Book. If you are playing with someone whose contact details are not in your Address Book, just type his name.

Enter his handicap index, and select the teebox for the player.

→ Important: *FunGolf always assumes you are the first player in the players list.*

To set a picture for a player, tap the Player icon. Scorecards with pictures look much nicer.

The screenshot shows a mobile app interface for adding a new player. At the top, the status bar displays 'SFR', signal strength, time '11:18', and battery level. Below the status bar is a header with a back arrow, 'Add Player' (in red), 'New Player' (in black), and 'Done' (in red). The main form area has a light gray background. On the left is a circular placeholder with 'add photo' in red. To the right are input fields for 'First Name', 'Last Name', and 'Email', each with a light gray underline. Below these is a field with the value '36.0' and a light gray underline. At the bottom of the form is a red link 'Add from Contacts'. Below the form is a section header 'TEEBOX' in a light gray box. At the very bottom is a red circle icon followed by the text 'Hommes Rouge' and '66.4 / 129'.

SFR 11:18

< Add Player New Player Done

add photo

First Name

Last Name

Email

36.0

Add from Contacts

TEEBOX

Hommes Rouge 66.4 / 129

➔ *FunGolf remembers the teebox for each player. However, as they may not be named consistently from one course to another, be sure to check the teebox for each player whenever you change the course.*

When you have finished setting up the player, tap the **Done** button.

Use the **Add new player** button as required to track the score for all the players in your round.

Health Data

FunGolf can export some data to the Health application on your iPhone: walked distance, energy burnt during a round. Tap

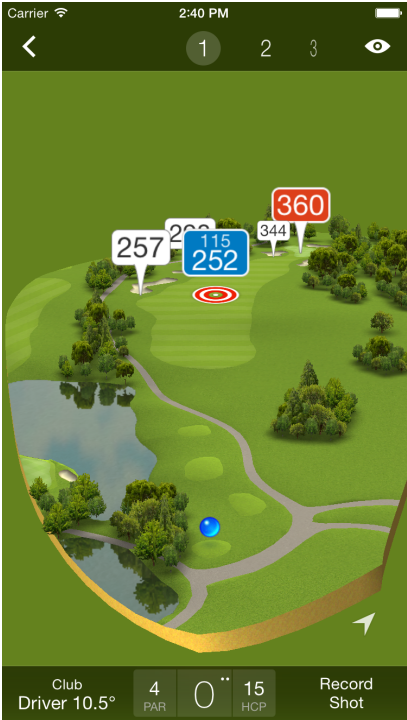

the Health Data button to toggle the recording on or off.

➔ *If you use FunGolf on the Apple Watch, activating Health Data will also enable heart rate measurements for the duration of the round. It can negatively affect the battery life of your watch. This will hopefully change in future version of watch OS.*

Ready?

To start the round, just tap «**Start**».

Main Screen

➔ *If you have not previously done so, allow FunGolf to access your location information. Otherwise it will not be able to locate you on the course nor give yardage to the green or hazards.*

*If you have previously denied access to your location information, you should go to the **Settings** application of your device to allow Location Services for FunGolf.*

What is on the screen

FunGolf shows a 3D map for the first hole of the selected course.

● As in the Maps application, the (blue) ball is located at your actual position. If you are not on the course, it is located arbitrarily in the middle of the back tees. Otherwise it appears "where you are".

The indicators show the yardage from the the player to various points on the terrain. The units (meters or yards) are specified in the main menu.

The red indicator shows distance to a green center.

White indicators shows distances to various hazards.

The blue indicator is your target. FunGolf calculates perfect target automatically, according to the hole characteristics and the selected club. The distance shown with smaller font size is the distance remaining to the green.

The back button brings you back to the [Round Settings](#).

On the top you see the current hole, and list of available holes in the course. Tap or slide the hole numbers to access the hole you want.

"Automatic" location button:

This button brings player indicator to your current location and adjusts the view around it.

Display mode

No other golf GPS has as many display modes as FunGolf:

- **3D:** the 3D view (default choice).
- **2D:** a high-contrast 2D vector map.
- **Satellite:** an aerial imagery from the hole. Requires network connection.

- **Yardages:** a numeric view showing the yardage to hazards, target, and green.
- **Flyover:** A nice 3D flyover on the hole to discover a new course.
- **Course Navigator:** an augmented reality view. It will show the current green, and tee boxes for every holes. Available only on the iPhone.

➔ *The «Course Navigator» can be very useful in a «Shotgun» tournament: it will help you locate your starting tee box.*

➔ *Only «Satellite» requires a network connection. All other modes work even without network connection.*

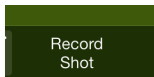

This is especially useful while playing abroad: you can turn off data and still use FunGolf, without worrying about expensive roaming plans.

Club Advice

Shows the recommended club to reach the Target.

(See § [Club Advice](#))

Record Shot

Tap this button when you hit the ball to record shot position. FunGolf will compute additional stats. See § [Shot Tracking](#).

Scorecard

Tap this button to edit the scorecard. See § [Scorecard](#).

Adjusting the view

FunGolf 3D view is interactive: when automatic mode is enabled, the chasing camera will "follow" you as you move. This of course can only be experienced while on the course.

But you can also adjust the view by panning your finger:

- pan vertically to move along the hole main direction.

- pan horizontally to move left or right.

If you have adjusted the view, automatic mode is disabled. To re-enable it, just tap the **automatic** button ().

Notice how additional yardage indicators appear as you move towards the green. FunGolf's sophisticated algorithm will compute and display indicators in real time. See how natural it feels: to get more info on a particular area, pan towards it.

➔ Even if you adjust the view, the yardages are always calculated from the player's position.

You can also zoom-in or out by using a two-fingers pinching gesture. Indicators will be bigger.

This is useful for players that needs to wear glasses to read.

Moving the Target

FunGolf calculates an ideal target automatically, and gives a club advice to reach it. But you can also choose the target position yourself by dragging it to another location.

Try this: move the target closer to your position and see how the club advice changes in realtime.

When the target position has been manually set, the target color changes to purple.

To re-enable automatic position for the target, tap the Automatic button ().

The target will turn blue and come back to its computed location.

Moving the Player

In automatic mode, the player icon is in sync with your GPS position. (if you are not on the course, it is arbitrarily located on the middle of the back tees).

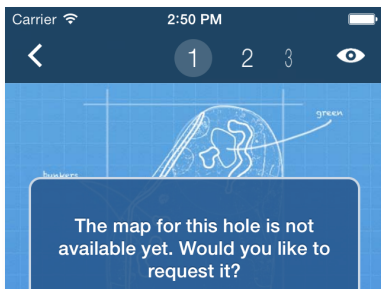

You can simulate a manual location by moving the player icon: make a «long» tap on it. As soon as it raises, you can drag it around, without releasing your finger. See

how the target moves in sync to it, and how additional yardage indicators are computed.

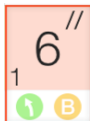

➔ *This is useful when you want to «prepare» your game ahead.*

Missing Course map

If the map for the course you have downloaded is not available yet, the following screen will appear.

Tap the **Request Map** button: it will tell our team you want to play this course. We will do our best to build a 3D map of the course. We process requests in a "first-in first-out" order.

➔ *We are usually able to map a course in 2 business days or less.*

When the map will be available, you will receive an email if you have created an account, and/or a Push Notification if you have allowed them.

➔ *To accept Push Notifications if you have previously refused them, go to the **Settings** application on your device.*

➔ *Even if the course map is not available, you can still use FunGolf to track your scores. Just tap the **Scorecard** button.*

|--|-----------------|-----------------|---|-------------------------------|
|  Me (23.6) Hommes Rouge | 5 [*] | 3 [*] | 7 ^{**} | 15 ²⁷ ₀ |
| | | |   | |
|  Tiffany (36.0) Hommes Rouge | 6 ^{**} | 4 ^{**} | 6 ^{**} | 16 ⁴¹ ₀ |

|  |  |  |  | |
|---|---|---|---|-----------|
| Gross Score | Putts | Fairway Hit | Bunker Hit | Penalties |
| 6 | | — | No | |
| 7 | — | ↖ | Yes | — |
| 8 | 0 | ↗ | | 1 |

Simple score input

To enter the score for a player, tap the corresponding cell and use the picker below to enter its gross score.

You may also enter the number of putts and penalties: FunGolf will then be able to compute additional stats for your game.

The gross score includes penalty and putts. For example, on hole #2, "Roger" played 7, including one penalty and 2 putts.

In that case, enter 7 in the first column, 2 in the "Putts" column, and "1" in the "Penalties" column.

➔ If you use the [Shot Tracking](#) feature, your scorecard will be pre-filled with recorded shots. But you can always edit your score independently in the scorecard.

Each cell in a scorecard can display up to 4 values:

- The number in the center is the player score.
- The dots in the upper right corner shows the handicap strokes.
- The lower left corner shows the number of putts.
- The red number in the lower right corner shows the penalties.

- The two icons below shows if you missed the fairway, or hit a bunker.

Advanced score input

You can tell FunGolf if you hit the fairway or a bunker by using advanced score input.

Tap the right arrow or swipe the score picker to reveal it:

| Gross Score | Putts | Penalties | |
|-------------|-------|-----------|---|
| 3 | 1 | | |
| 4 | 2 ⓘ | – | > |
| 5 | 3 | | |

If you enter meaningful values, FunGolf will be able to compute additional stats for your game.

Scorecard in landscape

Tilt your device to view the scorecard in landscape orientation: it will conveniently display 9 holes in a row.

date

 Add Player

Scorecard actions

Below the scorecard, you will find the following buttons:

- « **Rule** » to set game and scoring options (Gross, To par, Gross Stableford, Net Stableford, Stroke Play or Match Play for 2 players). You can also setup the Handicap system in use (USGA, EGA, CONGU, ...)
- « **Stats** » to view the stats for this round (including after-round simulated handicap index)
- « **Share** » lets you share your scorecard by email, twitter, facebook, AirDrop, or even print it if you have a compatible printer.

➔ *AirDrop sharing is convenient and fun to use: as it does not require a network connection, you can even use it while playing abroad.*

Your partners just have to be in range. They will receive the round as a PDF file even if they don't have the FunGolf application.

Account & Settings

This screen can be reached directly from the main menu.

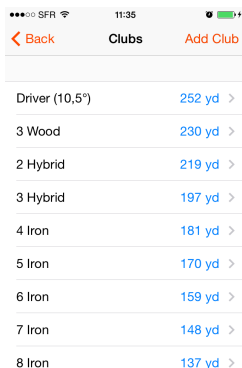

FunGolf account

You can create a free account on FunGolf servers. With a FunGolf account, you get the following benefits:

- you can save (and restore) your scorecard history on our secure servers.
- you can view statistics on multiple rounds.
- you can sync your data between multiple devices.

We advise you to create an account as soon as you have entered one round: your round data will be saved on our secure servers, and you will be able to recover them even if you have to change your phone.

Tap the "**Sign In**" button to Register a new account for free, or to Sign in with an existing account.

The screenshot shows a mobile application interface. At the top, there is a status bar with signal strength, 'SFR', time '11:35', and battery level. Below this is a navigation bar with three items: a back arrow and 'Back' in orange, 'Clubs' in black, and 'Add Club' in orange. The main content area is a list of golf clubs, each with a name and a distance in yards followed by a right-pointing chevron. The items are: Driver (10,5") with 252 yd, 3 Wood with 230 yd, 2 Hybrid with 219 yd, 3 Hybrid with 197 yd, 4 Iron with 181 yd, 5 Iron with 170 yd, 6 Iron with 159 yd, 7 Iron with 148 yd, and 8 Iron with 137 yd. The distances are in blue text.

| Driver (10,5") | 252 yd > |
|----------------|----------|
| 3 Wood | 230 yd > |
| 2 Hybrid | 219 yd > |
| 3 Hybrid | 197 yd > |
| 4 Iron | 181 yd > |
| 5 Iron | 170 yd > |
| 6 Iron | 159 yd > |
| 7 Iron | 148 yd > |
| 8 Iron | 137 yd > |

Settings

FunGolf lets you set:

- The size for the indicators labels. (Normal or Large)
- The distance units (meters or yards).

Club Settings

FunGolf advises you the club to play to reach your target. To make it work right, you should tell FunGolf which clubs are in your bag.

On the Hole Screen, tap the **Club** button.

A default club set will appear. Tap the **Edit** button to customize it.

Tap a club to edit it (or remove it). Tap on the **+ button** to add a new club.

For each club, make sure you enter your distance. FunGolf will use that number to calculate the club advised.

FunGolf will only advise clubs that are in your bag. You can use the **In the bag** switch to keep stats for clubs that you do not use on every golf round, without deleting them.

You do not have to enter the loft for each of your clubs. It is only useful for clubs that only differ by their loft, in order to distinguish them. Wedges, for instance.

➔ *If you have created a free FunGolf account, your clubs will be saved on our servers. If you use FunGolf on several devices with the same account, the club list will be synced between the devices.*

Club advice

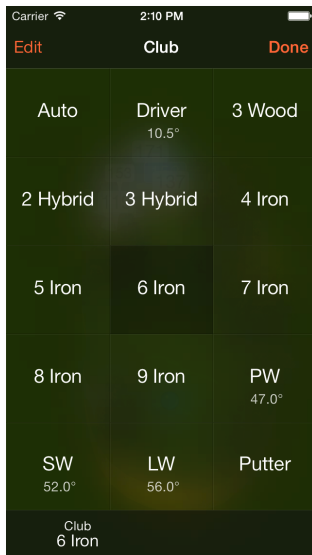

Now that your clubs are set up, you can make use of the **Club advice**.

FunGolf will suggest a club to play by calculating the distance to the target. But as FunGolf "knows" the hole, it will also take the "*lie*" into consideration. For instance, it will not advise you to play a Driver from the rough.

In some circumstances you want to play a different club than the suggested one.

Just tap the **Club Advice** button.

Choose the club to play in the list.

The target will then move to a newly computed position according to the chosen club.

To restore Automatic Club advice, tap the **Auto** button.

➔ *In Auto mode, the Club button background is blue, whereas on manual club selection, the background is black.*

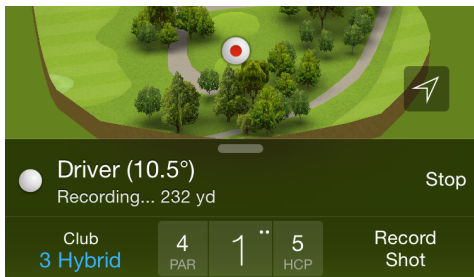

Shot Tracking

Shot Tracking is the process of recording the location of each of your swings. If you use Shot Tracking, FunGolf is able to calculate additional stats for your game.

➔ *Using the Shot Tracking feature is optional. You may use FunGolf without it, just by entering score in the **Scorecard**.*

Because it requires a tap on every shot, we recommend it to stats-avid golfers. You can also use Shot Tracking for some of your shots: drives, for instance.

To use Shot Tracking, just tap the **Record Shot** button each time you hit the ball.

A Shot Indicator will show up at the location of your shot, and all your shots will appear in the sliding shot list.

Watch how the shot length changes as you walk to your next shot. This feature will help you measure your drive length, and track average distance for each of your clubs.

You can qualify a shot by tapping the shot item: a details screen will show up.

Putt Strength

In hole

In this screen, you can:

- change the club you used
- Modify the *lie* for your shot (FunGolf will accurately guess the lie automatically, but in case it is wrong, you can override the lie

value here to ensure your "Fairways hit" stats are accurate)

- set attributes for the swing you made during your shot (a non full-swing will be discarded from shot statistics)
- set attributes for the trajectory of your shot (so you can see how often you slice or hook)

If the shot led to a penalty, you can enter it here by toggling the **Penalty** switch.

Continue recording your shots up to the green.

Putt tracking

Once on the green, the "Record Shot" button will automatically switch to "Enter Putts".

As it can be tedious to track your shots on the green the same way (due to the short length of the putts), FunGolf includes a Putt Tracking dedicated screen, that is very quick to use and still lets you gather interesting stats:

Tap the + or - buttons to adjust the number of putts.

You can now enter the distance to pin to each of your putts, and set in "Putt strength" if it was too short or long.

Saved Rounds

| | | |

Create a free FunGolf account to save your Rounds on our servers. This has several benefits:

- If you change your device, you will be able to get all your rounds history and clubs on your newer device.
- If you have several devices, (for example an iPhone™ and an iPad™) rounds and clubs will be synced between these devices.
- You can also review your scorecards from our website at www.fungolf.com

The sync is automatic when you enter the **Saved Rounds** screen, as long as you have signed-in with the same account on both devices.

From the **Saved Rounds** screen, you can also review the scorecard and shot history: tap a round to access its scorecard.

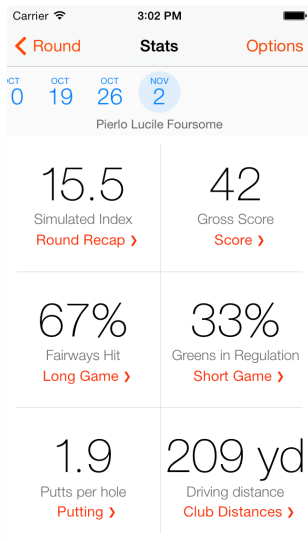

To delete a round, tap the **Edit** button then use the red "minus" button.

The current round cannot be removed.

➔ *While the synchronization itself requires a network connection, once synchronized, all your data is always available even without a network connection.*

Statistics

Dashboard

The dashboard conveniently groups all main indicators on your game.

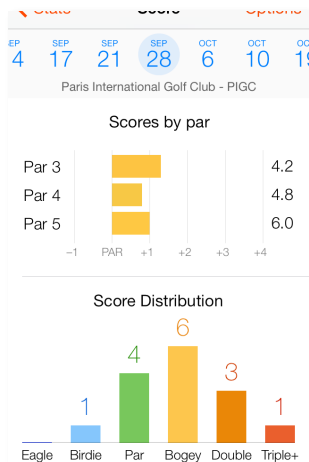

The round selector on top of the screen let you select for which round the stats are shown.

As you slide the round selector, you can see how the indicators evolve over time.

As you enter more and more data, the stats gets richer, and more accurate.

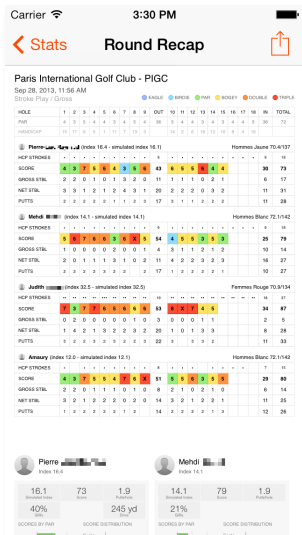

You can use the **Options** button to view stats on more than one round, and also restrict stats on a particular course.

Score stats

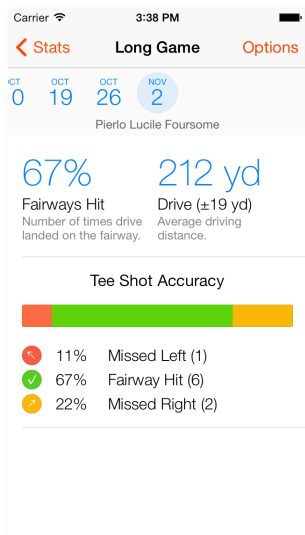

This chart shows scores by par and score distribution.

Round Recap

Shows a comprehensive scorecard for all players, ready to share. Send a nice souvenir to your foursome!

Long game stats

Fairways hit: Measures your drive / first shot accuracy: it is the percentage of first shots that hit the fairway or the green.

Drive: shows the average length for your first shots.

Tee shot accuracy: shows if you're missing fairways to the left, or to the right.

➔ *This data is only available if you [record](#) at least the first two shots, or if you use advanced score input.*

Short game stats

Green in Regulation: measures your long game accuracy: Greens are reached "in

Regulation" if you shot less than "PAR - 2" strokes.

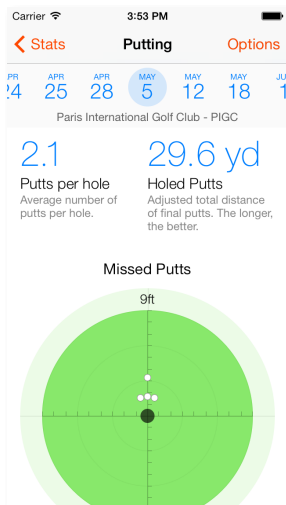

➔ *GiR data is available only if you enter your number of putts in the scorecard (or [record shots](#) when putting).*

Scrambling: This stat tells you how often you have been able to save the PAR despite not taking the green in regulation.

Sand saves: same as scrambling, but only when you hit a bunker.

➔ *Sand saves can only be computed if you use shot tracking or advanced score input.*

Putting stats

Putts per hole: Number of putts divided by the number of holes.

You should really go to the practice green if this number is bigger than 2!

This is probably the part of the game that can be improved with the best time-spent / stroke saved ratio!

Holed putts: This stat measures the quality of your putting. The value is extrapolated to 18 holes, so you can still compare it even if you play 9 holes or less.

A putt less than 0.5 yd still accounts for 0.5 yds, and a putt more than 5 yd is capped to 5 yds.

The longer, the better.

➔ *Holed putts is only computed if you enter the « distance to pin » for your putts.*

Missed putts graph: This graph shows if you're missing your putts short, long, left or right. It uses the info you provide in the putts tracker.

➔ *this stat is available if you enter values in the « Distance to pin », and « putt strengths » field of the putt tracker.*

Club Distances

If you use shot tracking, FunGolf GPS will show all the recorded shots, per-club. You

can review your distance, dispersion, and trajectories in a comprehensive graph.

Power savings

As any GPS intensive application, FunGolf requires some power to run: for a typical 18-holes round, expect an average consumption of 50%-60% of your battery charge.

Here are some tips:

- Ensure your phone is 100% charged before starting a round. If you drive to your golf course, use a car power adapter to keep your phone charged while on your way.
- Tap the "Sleep/Wake" button on your device to put your device to sleep when

you're not using FunGolf to read the yardage or enter the score.

➔ *If you have setup a passcode lock on your device, it can be tedious to enter it each time you need to read a distance.*

Go to the "Settings" application, then tap "General". In the "Passcode Lock" section, set the "Require Passcode" to "After 15 min", for example.

Happy Golfing!

With its innovative 3D view and smart indicators, FunGolf will always give you an accurate insight on the hole you are playing without any interaction from your part. And it will also suggest a club to play.

During the game do not forget to account for wind, temperature and strain as FunGolf is not aware of them.

Include FunGolf in your routine: it will help you gain confidence in your club choice and focus on your swing.

Rounds history and statistics are a very good tool to help you know your game better. Compare your metrics with friends, and show them to your local pro so he can help you work on specific parts of your game.

Thanks to its worldwide coverage and offline maps, FunGolf will be able to guide you during all of your golf trips with a peace of mind.

Happy Golfing!

The FunGolf team.

FunGolf on the Apple Watch

FunGolf on the Apple Watch enables an unrivaled experience on the course: the distance to the green and hazards is available right on your wrist.

You can leave your phone in your pocket and focus on your game.

Nonetheless, after your round, you can still browse your game stats and post-round recap on the bigger screen of your iPhone.

Installing FunGolf on your Apple Watch

On your Apple Watch, tap the FunGolf icon.

If you can't find the icon, launch the Apple Watch application on your iPhone and:

- ensure you have installed watchOS 2 (or a later version) by going to My Watch > General > Software Update
- ensure you have checked « Show app on Apple Watch », available in the My Watch tab, for FunGolf.
- You can also check Show in Glances

Open FunGolf automatically

By default, the Apple Watch will show the watch face when it wakes. While playing golf, you want it to go to the FunGolf screen so the yardage is immediately available.

To do that,

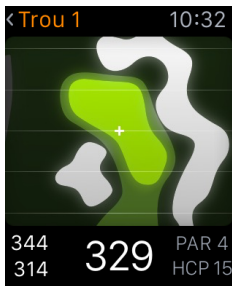

- 1) open the Settings app on your Apple Watch. 
- 2) Go to General > Activate on wrist raise
- 3) Choose Return to Last app used.

Start a Round

Tap the FunGolf icon to launch it. You can choose the course and configure the round directly on your phone.

Once started, the screen will show the list of all holes in the course. Tap hole 1 to show the main screen.

Main Screen

The main screen shows:

- a detailed map of the green
- the distance to the center of the green (329 in the screen shot). Distance units can be adjusted FunGolf in the Account & Settings

screen.

It is measured between you and the point indicated by the target.

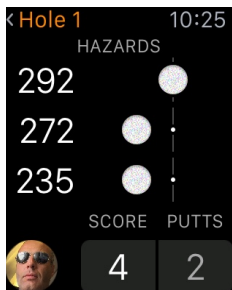

- distance to the front and back of the green are also shown in the lower-left corner of the screen.

- To get a better sense of distances, the map of the green is overlaid with lines every 10 yards (or meters, depending on your distance unit settings). It helps you estimate the pin position with a better accuracy.

Scroll down the screen, the hazards list will appear:

- white circles stand for bunkers.
- blue circles represent water hazard.

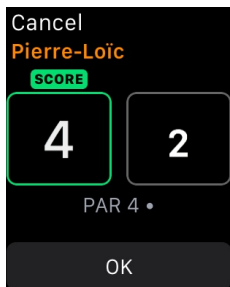

Their position can be to the left, center or right of your line of play.

In the example on the left, the first bunker is 235 yds away, on the left.

Every distance is measured from your position to the front of the hazard.

Entering your score

Scroll down on the main screen: below the hazards list, the score of every player is shown. Tap on the score cell to enter your score.

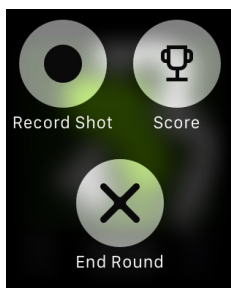

Use the digital crown to enter your gross score and number of putts.

Automatic hole-advance

FunGolf will automatically go to the next hole as soon as you have entered the score for all players in the round.

Shot tracking

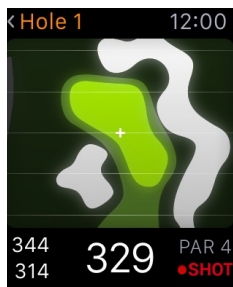

You can track all or some of your shots directly from your Apple Watch. A common use case for this is to see how far you hit your drive.

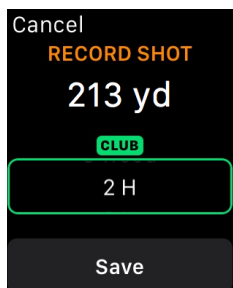

Force touch the main screen to bring the contextual menu.

Tap on the Record Shot button. You should do that either right before hitting

your ball, or right after. The idea is to do it at the location where you hit the ball, so FunGolf can record this location to compute the shot length.

The Shot indicator will blink on the main screen. You can now walk to your ball. Once reached, force touch the main screen to bring the contextual menu back, and tap «Stop Rec. »

The screen will show the distance travelled by the ball, and you will be able to enter the club used for the shot.

If you don't want to record the shot, you can force-touch the screen again: a Delete Shot button will pop up.

End Round

The Leaderboard screen will appear as soon as you have entered the score for all the players in your round.

If you want to end a round before that (like you are playing only 9 holes on a 18 holes course) force touch the screen to bring the contextual menu and tap End Round.

FAQ

I installed FunGolf but I can't find the FunGolf icon on my watch.

- Make sure you have installed watchOS 2 or later: open the Apple Watch app on your iPhone, go to My Watch > General > Software Update
- Scroll down to the FunGolf row, and ensure the « Show App on Apple Watch » is checked. You can also activate Show in Glances.

How do I activate FunGolf automatically instead of the watch face so it is quicker on the course?

- Open the Settings app on your Apple Watch.
- Go to General > Wake Screen and choose Resume to Previous Activity

Now launch FunGolf. Next time you'll raise your wrist, FunGolf will be presented instead of the watch face.

I am playing with a golf glove and sometimes the glove touch the Apple Watch side buttons. It quits FunGolf or makes some unwanted screenshots.

- You can wear your watch upside down so the digital crown will face your elbow, and not your hand.
- Go to Settings > General > Orientation and choose Left for the side of the Digital Crown: it will flip the display.
